# MULTIFLOOR

1/2

## Cover strips without visible fixing

- Information Sheet -

**DURAL**

### APPLICATION:

MULTIFLOOR edging and junction profiles form a profile system with a smooth surface where no securing screws are visible. They can be used as edging for laminate and parquet floors or as junctions to other types of flooring. They can also be used to hide any other junctions or expansion joints. The flat Multifloor-Profile is especially qualified to cover joints respectively transition of equal height flooring under doors.

### MATERIAL:

MULTIFLOOR edging and junction profiles are made from aluminium with anodised surface finishes in gold, silver, bronze, and champagne, as well as with decorative wood finishes in the form of PVC foil in light maple, maple, beech, oak, antique oak, rustic oak, kempas, cherry and merbeau.

### PROPERTIES:

MULTIFLOOR profiles are clipped onto plastic plugs inserted into pre-drilled holes at random intervals. Profiles automatically adapt to the height of the flooring without any need for fine adjustment. The plastic plugs are flexible enough to compensate for height differences in optimum fashion. The profiles themselves lay very flat and harmoniously match heights with any flooring, e.g. at junctions between two flooring materials in a doorway. The smooth surface of the profiles without annoying screws provides the perfect edging for any floor. Profiles are also available with self-adhesive backing to eliminate need for plastic plugs.

### MAINTENANCE:

MULTIFLOOR profiles require no specific maintenance. Any dirt can be removed using normal cleaning materials. However, the cleaning materials must be free of hydrochloric or hydrofluoric acid, and should not scratch the surface.
